The Story That Started Komute

@DarkskinnedElla — March 2026

Onyinyechi Nwachukwu, a TikTok creator, began documenting her daily commute from Ikorodu to Lagos Island. Her videos showed thousands of commuters stranded in queues at the Ikorodu BRT terminal sometimes waiting over two hours despite arriving as early as 4–5 AM.

The videos went viral, sparked a national conversation, and ultimately forced LAMATA to deploy additional buses overnight. Her employer rewarded her with a one-year transport allowance.

Her story is not an exception. It is the daily reality for millions of Lagos commuters.

Komute exists because Ella's story should not be possible.

Videos went viral nationally

LAMATA forced to deploy extra buses overnight

**Employer awarded transport allowance
+ pay rise**

What's Breaking the Commute?

30–90 min queues

Workers queue for over an hour at bus stops every single morning before their day even starts.

4–5 AM wake-up times

No guaranteed seat

Commuters arrive early with no certainty of getting on the next bus. First-come, first-served chaos.

Zero reliability

Unpredictable timing

65% of surveyed commuters cited unpredictable arrival time as their top commute frustration.

65% cite this as top pain

High transport cost

70% spend ₦1,000–₦2,500 daily. Monthly, that's ₦20,000–₦50,000 — 20–30% of income.

70% affected

Safety concerns

Women especially face safety risks in danfos and keke — with no way to verify who they are riding with.

Especially women commuters

No structured middle ground

Bolt/Uber are too expensive. Danfo/BRT are too unreliable. There is nothing in between.

The gap Komute fills

[VIEW OUR INSIGHT DOCUMENT HERE](#)

Komute : **Not Ride-Hailing**. Commute Infrastructure.

Competitors say:

“Book a ride NOW”

On-demand, reactive, unpredictable

vs

Komute says:

“Plan your daily commute”

Planned, reliable, affordable, verified

How it works

01 Book tonight

Search tomorrow’s rides by 10 PM. Pick your driver, see co-riders, confirm your fare upfront.

02 Match & pay

Get matched with verified riders on the same route. Pay via card, transfer, or USSD.

03 Ride tomorrow

Wake up, track your driver live, board at your pickup point. Guaranteed seat. No queue.

Who Komute is Built For

PRIMARY — Riders

9-to-5 Workers & Commuters

- Daily commuters from Ikorodu, Mowe/Ibafo, Ajah, Lekki-Epe, Mainland (Ikeja, Yaba, Surulere)
- Ages 22–45, smartphone users, mobile payment access
- Spending ₦20,000–80,000/month on transport
- Income-strained workers who need reliability without Bolt's price
- Women prioritising verified co-riders and safety
- Survey: 85% would switch to Komute immediately

SECONDARY — Vehicle Owners

Drivers / Operators

- Private car owners commuting the same route daily
- Keke (tricycle) operators on fixed morning routes
- Shuttle/mini-bus operators seeking steady bookings
- Not professional drivers — neighbours going the same way
- 2 of 3 vehicle owners in survey had empty seats daily
- Potential weekly earnings: ₦15,000+ from filled seats

Must-Have Features — Data-Backed

Verified identity badges

NIN, face match, FRSC license status on every driver profile before booking.

75% require this before sharing a ride

Night-before booking

One-tap re-booking of usual route by 10 PM. Seat locked. No morning stress.

40% already plan the night before

Upfront fare display

Exact fare shown and confirmed before booking. No surprises, no surge pricing.

55% need cost transparency

Real-time trip tracking

Live driver location on map. Shareable safety link for trusted contacts.

55% need this to feel safe

Flexible pickup radius

Riders pin their street. Drivers set pickup radius. No fixed bus-stop dependency.

50% say proximity is make-or-break

Co-rider visibility

Names, photos, and ratings of every co-rider shown before departure.

65% want to know who's in the car

What 20 Commuters Told Us

BIGGEST PAIN POINTS (MULTI-SELECT)

85% | would switch to Komute

75% | need verified platform to share a ride

70% | spend ₦1,000–₦2,500 daily

65% | want to know co-riders before boarding

“ A comfortable transportation network from my neighborhood to office district. Stress-free and predictable.

— Survey respondent, Mainland Lagos

How Komute Grows & Sustains Itself

REVENUE STREAMS

- 1

Platform commission

10–15% on every completed ride, auto-deducted before driver payout.
- 2

Subscription plans

Weekly & monthly recurring booking packages at discounted rates.
- 3

Corporate partnerships

Bulk commute plans for companies subsidising employee transport.
- 4

Premium booking tier

Priority seat + first pickup position on high-demand routes.

SUCCESS METRICS

- Ride completion rate

> 90%
- Wait time reduction vs BRT

> 50%
- Night-before booking adoption

> 60%
- 30-day commuter retention

> 65%
- Driver supply (Month 1)

50 active
- Avg rider satisfaction

≥4.3 / 5.0

Three Phases to African Scale

MVP — Launch

Months 1–3

- Night-before booking system
- Driver & commuter onboarding
- Identity verification (NIN, FRSC, BVN)
- Fixed routes & pickup radius
- Upfront fare & in-app payment
- Co-rider visibility screen
- Basic push notifications

Growth

Months 4–6

- Recurring Mon–Fri auto-booking
- Real-time vehicle tracking
- Monthly savings tracker dashboard
- USSD fallback for data-constrained users
- Driver rating system
- Smart arrival alerts
- Corporate pilot programme

Scale

Months 7–12

- AI ride matching & route optimisation
- Multi-city rollout (Abuja, Port Harcourt)
- Corporate accounts & bulk booking
- Referral & promotions engine
- Seat selection for shuttle buses
- Pan-African expansion planning

The Validation is Done. Time to Build.

85% of Lagos commuters would switch to Komute today.

The problem is real. The market is ready. The infrastructure doesn't exist yet.

- 1 Win the Mainland first. 65% of survey respondents are in Ikeja, Yaba, and Surulere.
- 2 Onboard supply before demand. Get verified vehicle owners live before commuter launch.
- 3 Lead with savings. 'Save ₦40,000/month on transport' is the #1 emotional hook in the data.
- 4 Launch the 6 trust-critical features first. Verification and co-rider visibility are blockers, not nice-to-haves.
